

22.08 PROTECTION OF BIODIVERSITY13/08/2009
C84

This policy applies to land covered by an ESO1, ESO2, and ESO3 Overlay.

22.08-1 Policy Basis13/08/2009
C84

The incorporated map 'Sites of Remnant Vegetation' (Biosis 2001) shows the location of sites containing remnant vegetation in the City of Yarra.

Few areas of remnant vegetation remain in Yarra except those along the Yarra River and the northern waterways. A number of remnant indigenous plants within Yarra are considered to be of regional conservation significance, and areas of regional, high local, and local significant vegetation have been identified in the Natural Heritage Study undertaken by Biosis (2001). These areas of significant vegetation are under threat from development including by the invasion of pest plants.

22.08-2 Objectives13/08/2009
C84

- To protect and enhance Yarra's natural biodiversity.
- To protect the long term survival and viability of remnant vegetation.
- To ensure the survival of indigenous species.
- To minimise the impacts of introduced flora and fauna on indigenous vegetation.
- To manage sites to allow for the natural regeneration of indigenous vegetation.

22.08-3 Policy13/08/2009
C84

It is policy that:

- Areas of remnant vegetation not be disturbed.
- The disturbance of non-remnant indigenous vegetation be minimised.
- A landscape plan be approved by Council before a development commences.
- Indigenous species, as identified in Table 1 or as certified (as being indigenous) by a qualified horticulturalist be used.
- Environmental weed species as identified in Table 2 not be used.
