Protection of agricultural land

Strategies

Encourage and support the continued use of land for farming in areas where it has traditionally been concentrated on French Island.

Support dwellings in rural areas outside the Restructure Overlay on French Island that have a direct relationship with agricultural activity conducted on the land.

Discourage tourism uses and development that compromise the primary agricultural use of rural land.

Ensure that any land use or development on rural land abutting the French Island National Park has no long-term adverse impact on the Park environs and natural ecosystems.
