SCHEDULE 3 TO CLAUSE 42.02 VEGETATION PROTECTION OVERLAY

Shown on the planning scheme map as VPO3.

KALKALLO GRASSLANDS

1.0

19/01/2006
VC37

Statement of nature and significance of vegetation to be protected

The grassland in Kalkallo is a remnant of Plains Grassland, dominated by a number of threatened plant species, and containing a diversity of reptiles and amphibians. It contains one of the largest concentrations of Common Spadefoot Toads recorded in the area, and serves as a partial habitat link between the Merri Creek and grassland sites near Bald Hill and Craigieburn.

The grassland is significant for its diversity and environmental value in providing a habitat of regional significance.

The ability to maintain the biodiversity and durability of the grassland is dependent on retaining existing vegetation and the revegetation of disturbed areas with indigenous species.

Application requirements

An application to remove native vegetation must indicate:

- The total extent of vegetation on the property and the extent of native vegetation proposed to be cleared.
- The purpose of the proposed clearing and any proposals for revegetation, including proposed species, and ground stabilisation.
- A report by a suitable qualified person which describes the vegetation and habitat significance of the site, to the satisfaction of the responsible authority.

Decision guidelines

The following decision guidelines apply to an application for a permit under Clause 42.02, in addition to those specified in Clause 42.02 and elsewhere in the scheme which must be considered, as appropriate, by the responsible authority:

- The effect of the proposed removal of native vegetation on the habitat value and long-term viability of remnant grasses in the vicinity.
- The significance of the native vegetation area.
- The reason for removing the vegetation and the practicality of alternative options which do not require removal of the native vegetation.
