Car parking

Objective

To manage car parking through demand management techniques

Strategies

Encourage use or development proposing limited or no on-site car parking to locate in areas proximate to public transport.

Locate and design off-street car parking facilities to:

- Provide for active frontages.
- Provide required services for electric vehicles such as charging points.

Locate and design crossovers to minimise their impact on the supply of on-street car parking spaces.

Policy guideline

Consider as relevant:

- The adequacy of the provision of off-street parking on the basis there will be no residential parking permits available for future residents where the number of dwellings or separate occupancies have increased on the site.
