SCHEDULE 4 TO THE DESIGN AND DEVELOPMENT OVERLAY

Shown on the planning scheme map as DDO4.

NEIGHBOURHOOD ACTIVITY CENTRES

1.0 Design objectives

To ensure new development is designed to facilitate a lively, attractive and safe local activity centre, and assist in improving its economic viability.

To ensure new development is designed to respond to the immediate site environs, reflect the role of the centre and enhance the character of the surrounding residential area.

To ensure new buildings incorporate design detail that provides a high quality and visually interesting interface with the streetscape (including internal streets within larger centres) and the surrounding residential area, addressing issues of amenity, functionality, adaptability and accessibility.

To ensure new buildings create a complementary interface to enhance the public realm.

To ensure new development is designed to minimise potential off-site impacts such as noise (including from services), overlooking, access to sunlight, and light spillage on adjoining residential properties.

2.0 Buildings and works

The following buildings and works requirements apply to an application to construct a building or construct or carry out works:

Building heights

- Buildings and works should not exceed the preferred maximum building height specified in the table and maps to this schedule.

- An application to exceed the preferred maximum building height must demonstrate how the development will continue to achieve the Design Objectives and Built Form Outcomes of this schedule, and any local planning policy requirements.

- The preferred maximum building height excludes rooftop services which should be hidden from view from any adjoining public space or designed as architectural roof top features. Rooftop services includes but is not limited to plant rooms, air conditioning, lift overruns and roof mounted equipment.

- Where the property abuts a residentially zoned site, all measurements of height should be taken from the abutting residential property boundary.

Building setbacks

- Buildings and works should be in accordance with the preferred setbacks specified in the table and maps to this clause.

- Properties abutting a residential zone must provide transitional upper level setbacks at the residential interface to maintain the amenity of adjoining residential properties.

- Built form for non-residential uses at ground level should provide active frontages to streetscapes.

- Recessed upper levels are preferred to reduce the appearance of building bulk.

- An application to vary the preferred setbacks must demonstrate how the development will continue to achieve the Design Objectives and Built Form Outcomes of this schedule and any local planning policy requirements.

### Subdivision

None specified.

### Advertising signs

None specified.

### Decision guidelines

The following decision guidelines apply to an application for a permit under Clause 43.02, in addition to those specified in Clause 43.02 and elsewhere in the scheme which must be considered, as appropriate, by the responsible authority:

- An application to exceed the preferred maximum building height and/or vary the preferred setbacks must demonstrate how the development will achieve the Design Objectives and Built Form Outcomes of this schedule, and any local planning policy requirements;
- Whether the proposed buildings or works achieve high or superior architectural quality;
- Whether the proposed buildings or works achieve innovation with respect to environmental sustainability;
- Whether the proposed buildings or works involve innovative approaches to heritage fabric;
- Whether the proposed buildings or works achieve an equivalent or better design outcome;
- Whether the proposed buildings or works minimise impacts on amenity;
- Whether the design response to the site context including heights and setbacks on adjoining properties and existing neighbourhood character; and
